

DAVID D. DONIGER

David Doniger is policy director of the Natural Resources Defense Council's (NRDC) Climate Center, where he helps to develop environmental and energy policies that reduce the threat of global warming and enhance America's energy security.

Doniger also directs NRDC's efforts to complete the phase-out of ozone-depleting chemicals under the 1987 Montreal Protocol, the treaty to protect the earth's fragile ozone layer.

Doniger first began at NRDC in 1978 and worked on clean air issues for the next 14 years, helping to win passage of the 1990 Clean Air Act amendments and the 1987 Montreal Protocol.

From 1993 to 2001, Doniger served in the Clinton administration, first at the White House Council on Environmental Quality, and then at the U.S. Environmental Protection Agency where he was director of climate change policy and, before that, counsel to the head of the EPA's clean air program.

Doniger rejoined NRDC's Climate Center in March 2001. He holds a law degree and a masters degree in city and regional planning from the University of California at Berkeley and a B.A. in history from Yale University.
